March 2009

DEP Joint Coastal Permit Update, March 2009

By Michael R. Barnett, P.E., Chief
Bureau of Beaches and Coastal Systems

As we all know, healthy beaches are a valuable part of Florida's coastal infrastructure and imperative to our economic recovery. The Department's Bureau of Beaches and Coastal Systems recognizes the vital importance of responsible beach and inlet management projects and continues to do its part in realizing this goal. In the past few months, the Bureau has issued eleven Final Orders and four notices of Intents to Issue permits for beach and inlet management projects. We also recently

completed one file which seeks an initial restoration of several segments of shoreline in the Panhandle. These construction permits authorize federal and local governments to construct large scale ...

2009 National Conference on Beach Preservation Technology Wrap-up

We are very thankful for the hard work of the 2009 beach technology conference planning committee.

Their dedication and effort over the last several months certainly paid off. We offered an outstanding conference program and attendance, including engineers, local government coastal program managers, and elected officials from all over the East Coast, Gulf Coast, and even California, was excellent!

DEP Joint Coastal Permit Update, March 2009

By Michael R. Barnett, P.E., Chief
Bureau of Beaches and Coastal Systems

As we all know, healthy beaches are a valuable part of Florida's coastal infrastructure and imperative to our economic recovery. The Department's Bureau of Beaches and Coastal Systems recognizes the vital importance of responsible beach and inlet management projects and continues to do its part in realizing this goal. In the past few months, the Bureau has issued eleven Final Orders and four notices of Intents to Issue permits for beach and inlet management projects. We also recently completed one file which seeks an initial restoration of several segments of shoreline in the Panhandle. These construction permits authorize federal and local governments to construct large scale infrastructure projects. A brief description of these recent permit actions follows, along with a few photographs of some of the project shorelines.

Beach Restoration/Nourishment/Inlet Management Plan Implementation Projects

Recently Issued Final Orders:

Juno Beach Nourishment (Palm Beach County) – Ten-year authorization for nourishment of 2.4 miles of Atlantic Ocean shoreline in Palm Beach County. A Notice to Proceed was issued on January 28, 2009.

Lido Key Post-Storm Nourishment (Sarasota County) – Notice to Proceed for nourishment of 1.5 miles of Gulf of Mexico shoreline with 328,000 cubic yards of sand from New Pass ebb shoal complex issued February 13, 2009.

North Boca Raton Nourishment (Palm Beach County) – Ten-year authorization for nourishment of 1.45 miles of Atlantic Ocean shoreline using offshore borrow area issued September 2008.

Hillsboro Inlet Maintenance Dredging and Sand Bypassing (Broward County) – Ten-year authorization issued December 2008 for ongoing maintenance dredging and bypassing of inlet channel to downdrift shoreline.

Doctor's Pass Maintenance Dredging (Collier County) – Notice to Proceed for dredging of 36,000 cubic yards of material with nearshore placement issued January 23, 2009.

Wiggins Pass Maintenance Dredging (Collier County) - Notice to Proceed for dredging of 49,600 cubic yards of material with nearshore placement issued January 23, 2009.

South Lake Worth Inlet Sand Transfer Plant Rehabilitation, and North and South Jetty Repairs (separate regulatory authorizations- Palm Beach County) – Construction planned in 2009.

Pensacola Naval Air Station Channel Maintenance Dredging (Escambia County) – Ten-year authorization issued January 2009 for dredged material placement on Perdido Key.

Broward County Glass Cullet Experimental Project - Nearshore Placement of 2,000 cubic yards.

Longboat Key Permeable Groins (Sarasota County) – Construction and (ten-year) maintenance authorization for two structures, each approximately 250 ft in length at the Islander Condominium.

Perdido Key Beach and Dune Restoration (Escambia County) – Five-year authorization to restore 6.5 miles of Gulf of Mexico shoreline with 1.25 million cubic yards of sand from an offshore borrow area.

Photo taken Courtesy of Olsen Associates, Inc. on September 17, 2008 at R31 Lands End

Recently Processed Notice of Intent/Draft Permits:

Brevard Mid-Reach Beach Restoration (Brevard County) –

Five-year authorization to restore 7.6 miles of Atlantic Ocean shoreline with 900,000 cubic yards of sand from an offshore borrow area.

Eglin Air Force Base Beach Restoration (Okaloosa County) –

Five-year authorization to restore 5.1 miles of Air Force Base shoreline fronting the Gulf of Mexico (3 discontinuous shoreline reaches) with 2.7 million cubic yards of sand from an offshore borrow area.

Matanzas Pass Dredging and Disposal (Lee County) –

Ten-year maintenance permit to maintain federal navigation channel; 2009 event will remove ~219,000 cubic yards of material, to be placed in the nearshore along one mile of the Fort Myers Beach shoreline south of the pier.

Miami Beach Truck Haul Nourishment (Miami-Dade County) –

Major modification to allow placement of approximately 305,000 cubic yards of sand along Sunny Isles, Bal Harbour and Miami Beach shoreline segments using upland sourced sand. These placement areas are added to the three shoreline segments currently authorized by the permit (27th, 44th and 55th Streets).

Recently Completed JCP Applications:

Walton County 30-A Corridor Beach Restoration Project –

Request to place approximately 5.6 million cubic yards of sand along four discontinuous shoreline segments comprising 13.5 miles of Gulf of Mexico shoreline using sand from an offshore borrow area.

The resulting projects, once constructed or undertaken, will provide the requisite storm protection benefits to the recipient shorelines. In addition, these projects will provide benefits to our economy by attracting tourists and increasing property values. We recognize that there are many more miles of shoreline to restore and maintain, and continue to work toward completing several other applications from all regions of the state with our federal and local sponsor partners.

Stay tuned for future updates!

2009 National Conference on Beach Preservation Technology Wrap-up

Attendees head back into session

By Lisa Armbruster
Assistant Director of Governmental Affairs

We are very thankful for the hard work of the 2009 beach technology conference planning committee. Their dedication and effort over the last several months certainly paid off. We offered an outstanding conference program and attendance, including engineers, local government coastal program managers, and elected officials from all over the East Coast, Gulf Coast, and even California, was excellent!

The conference kicked off with an encore of Dr. Kevin Bodge's Beaches 101 class, which was a hit at FSBPA's annual meeting last fall in Captiva, FL. No doubt it was a hit again, with elected officials especially appreciating this one-hour primer (with entertainment, as those who know him have come to expect with Dr. Bodge). Participation was even higher than in the fall, and we are already planning to perhaps establish this tradition of offering coastal primers at our future conferences.

The beautiful, wide, white-sand beach behind the TradeWinds. Photo courtesy of longtime FSBPA member Pat Pacitti

Conference Attendees enjoy the tasty buffet luncheon sponsored by the St. Petersburg/Clearwater Area Convention and Visitors Bureau

2009 Conference Planning Committee

Executive Committee Members

- Michael Barnett**, P.E., Florida Department of Environmental Protection
- Kevin Bodge**, Ph.D., P.E., Olsen Associates, Inc.
- Douglas Mann**, P.E., Coastal Planning & Engineering, Inc.

Members

- Karl Havens**, Ph.D., Florida Sea Grant
- Robert Dean**, Ph.D., P.E., University of Florida
- Michael Walther**, P.E., Coastal Technology Corporation
- C. Scott Hardaway, Jr.**, Virginia Institute of Marine Science
- Jonathan Gorham**, Ph.D., FSBPA Board of Directors and Indian River County, FL
- Jason Engle**, P.E., U.S. Army Corps of Engineers, Jacksonville District
- Lynn Bocamazo**, P.E., U.S. Army Corps of Engineers, New York District
- Bill Curtis**, U.S. Army Engineer Research and Development Center, Vicksburg, MS
- John Ramsey**, P.E., Applied Coastal Research & Engineering
- Spencer Rogers, Jr.**, North Carolina Sea Grant
- Kenneth Banks**, Ph.D., P.E., Broward County, FL Natural Resources Planning and Management Division
- Todd Walton**, Ph.D., P.E., Florida State University, Beaches and Shores Resource Center

Attendees enjoy networking during a sponsored break in the exhibition hall. More than 20 companies displayed their wares during the three-day conference in St. Petersburg Beach.

Wednesday's opening session was packed with excellent presentations and speakers. The conference opened with a review of an interesting assessment of Hurricane Ike damages, and we also heard about various projects from all along the East Coast. Thursday's concurrent sessions provided an opportunity to learn about a variety of topics: environmental challenges, inlet management, wave modeling, and more projects! We all seem to especially appreciate hearing about project experiences. Friday closed with presentations on beach erosion control structures as well as discussion on Florida's offshore sand resources.

For those you that were able to attend, we provided a survey on the entire conference experience at the conference itself; if you did not have time to complete the survey at the conference, it remains available online. This survey not only solicits your opinions on the conference in general, but it also asks very specific questions on the conference program content. Your responses to these questions are extremely important to us. They help us to understand and appreciate your desires and needs to make this the most worthwhile conference possible. If you attended and have not had a chance to express your thoughts, please visit fsbpa.com to fill out and submit the form online – it is quick and easy. Your comments do not go unnoticed; watch for a summary of the survey response in the next Shoreline newsletter.

Thanks again to our 2009 Conference Planning Committee, who volunteered their time to create an excellent conference program. Our Conference Executive Members deserve extra thanks for their efforts above and beyond the call of duty.

We owe equal thanks to our conference sponsors! Your support is just as critical to a successful conference; it provided essential conference note books and bags, as well as coffee breaks, opening welcome reception, and lunch buffet. Our conference attendees truly enjoy and appreciate these extras. We all look forward to of the opportunity to interact and socialize with colleagues and friends at this conference, and we recognize this networking is an important aspect of the technology conference.

The 2009 Legislative Session Begins

By Debbie Flack
Director of Governmental Affairs

It's official! On Tuesday, March 3, the 2009 Legislative Session began. After January's Special Session and five weeks of committee meetings, it's almost a relief. It has to get started to end. The appropriations process promises to be quite painful - - core state program missions are being reexamined, the use of federal stimulus dollars will be hotly debated, and further state budget reductions of as much as \$6 billion will affect almost every state program. Be assured Florida's beach management program will not be spared.

Documentary stamp tax revenues have been so severely impacted by the real estate collapse that statutory dedicated funding of \$30 million for beaches was proportionally estimated in November to be just \$5.22 million for FY 09-10, and may even go lower. The Governor's Recommended Budget provides only \$4.8 million for statewide beach projects. We can only hope there is a greater legislative appreciation for the role healthy beaches might play in Florida's economic recovery. These two figures (\$5.22 and \$4.8 million) are bad enough on their own. But also consider, in contrast, DEP's Local Government Funding Request (LGFR) transmitted to the Legislature on February 18, includes almost \$70 million in total beach project requests beginning with a \$25 million priority list.

Nothing will come easy. If the doc stamp's proportional allocation or Governor's recommended funding level is all that prevails, Florida's statewide beach management program will not even be in a position to fully cost-share the post-construction monitoring requirements of local government sponsors and just the number one-

ranked nourishment project (Brevard County, South Reach) which has federal matching dollars in hand.

Clearly, this is not acceptable, but might certainly be the final outcome. FSBPA, many of our local coastal governments, and their general government associations are already hard at work to avoid this result. We need your help, and that of your local elected officials, to convince lawmakers of the importance of sustaining a viable, albeit scaled-down, beach program for the coming year that funds a few nourishment projects that are ready-to-go and have federal and local matching dollars available.

FSBPA has an overall funding strategy that will be refined as the appropriations process in Tallahassee proceeds and we have a better understanding of what impact, if any, Corps of Engineers water-related stimulus dollars have on our federally-authorized beach projects. This is basic survival mode! Fortunately, Florida's beaches have a number of legislative advocates, and we have a worthy cause and a reasoned, economically-justified message.

Time to go to work!!!!

FSBPA, through our BeachWatch Program, will also be actively following a few substantive bills during the 2009 Session and monitoring others. They include:

- Possible legislation based on the final report of the Beach Management Working Group (See Shoreline, January)
- Public Access to Beaches (SB 488, Justice and HB 527 Sachs)
- Various permit streamlining initiatives (as they effect CCL and JCP permitting)
- All Chapter 161, the Beach and Shore Preservation Act, vehicles

April and May issues of Shoreline will include legislative updates.

USACE JACKSONVILLE DISTRICT:
FEDERAL PROJECT STATUS UPDATES

FEASIBILITY STUDIES:

- **St. Johns County** – Beach-fx economic modeling continues. Detailed damage curves are being developed and data is currently being gathered on damage elements and first floor structure elevations. The first Beach-fx model run is expected by Spring 2009. Bathymetric surveys of the offshore borrow areas are complete. The potential offshore borrow sources are now being further delineated. Milestone of Feasibility Scoping Meeting is set for October 2009.

Flagler County – Beach-fx economic modeling is underway and is on the same general timetable as St. Johns County. Detailed damage curves are being developed and data is currently being gathered on damage elements and first floor structure elevations. The first Beach-fx model run is expected by Spring 2009. The Notice of Intent to prepare an EIS has been mailed to all coastal residents along County Road A1A. Shoreline process data collection and modeling has begun, SAJ is gathering final information for the tropical and extra-tropical storm database. Painter's Hill, Beverly Beach, and Flagler Beach study reaches have lengthened corresponding to current FDEP critical erosion areas. The sponsor plans to have a draft borrow area document completed by late summer 2009.

- **Volusia County** - on hold. No non-Federal funding.

- **St. Lucie County** – Jacksonville District will be initiating Beach-fx work during FY09. The Review Plan (RP) has been sent to the Planning Center of Expertise (PCX) and is awaiting approval. The non-Federal Sponsor is conducting environmental surveys and performing assessments.

OTHER MAJOR PLANNING REPORTS:

- The **Brevard County Mid-Reach General Reevaluation Report (GRR)** team has completed the draft report. The report recently received Agency Technical Review (ATR) and Legal Certification and the revised cost/risk analysis is awaiting final approval. The report is expected to be submitted to SAD and Headquarters for approval in mid March.

- The **North Boca Raton Second Periodic Renourishment Revised Final Limited Reevaluation Report (LRR)** was approved by Corps South Atlantic Division (SAD) in June 2008. SAD endorsed the Project Cooperation Agreement package for Corps Headquarters review and approval in September 2008.

- **Jupiter/Carlin Shore Protection Project** - Palm Beach County has started a 934 report/NEPA document for Jupiter/Carlin Segment to extend Federal participation for the next renourishment. The Sponsor has requested waiver of Beach-fx to in order to use originally utilized model, SDM. This request has been sent to South Atlantic Division for guidance.

- Guidance has been requested from higher authority on the review process for the **Draft Ft. Pierce Shore Protection Project GRR** completed by the non-Federal Sponsor. The GRR seeks an additional 50 years of Federal participation in the project as well as the inclusion of groins to the project area. The Review Plan (RP) has been sent to the Planning Center of Expertise (PCX) and awaits approval.

Broward County Shore Protection Project - Segment I (north county line to Hillsboro Inlet) - GRR and NEPA document – The Non-Federal funds have been provided by the sponsor and preparation of the GRR and NEPA document for initial construction of this segment has been initiated by the Jacksonville District. **Segment II** – GRR Addendum and NEPA document – Sponsor has initiated their GRR Addendum for the upcoming renourishment. **Segment III** – Preparation of a Design Documentation Report (DDR) by Jacksonville District was requested by the Broward County project sponsor to address the subsidence/erosion of the beach fill at the northern end of Segment III under the authority for the Shore Protection project. This location is immediately south of the south jetty at Port Everglades. Approval to initiate the DDR under the Shore Protection authority has been requested from the South Atlantic Division office in order for Jacksonville District to initiate the DDR.

The Brevard County, Florida Independent Coastal Expert (ICE) Letter Report has been revised per SAD, HQ, and Planning Center of Expertise (PCX) comments. The revised report underwent Agency Technical Review (ATR) by the PCX in September 2008. SAJ final review was completed on 17 December 2008. The final report has been sent to South Atlantic Division and Headquarters for concurrent review. Headquarters policy review is complete, the revised report awaits ASA(CW) decision if recommended mitigation is appropriate and warrants budgetary priority.

In **Dade County** work was funded for a **Section 227 Project** at 63rd Street in Miami and was reinitiated in August 2008. A design and build contract is being evaluated in cooperation with the Department of Environmental Resources Management (DERM) and Reef Innovation, Inc. Upcoming, Genesis modeling is underway to determine the minimum structural footprint and the exact project location.

The **Martin County Post Authorization Change Report has been completed** by SAJ. This report evaluated impacts to the Benefit/Cost ratio of the approved Shore Protection Project due to the use of a new borrow area. The results of the report concluded that the B/C ratio remains at a healthy 4.5. Following review of the recently completed report, Headquarters agreed that there is no need for completion of an LRR and recommended that a Letter Report would be sufficient. The Letter Report will summarize the use of the new borrow area as well as turtle-friendly beach construction templates which are being evaluated for use on this project.

Egmont Key - Draft Public Notice has been sent to South Atlantic Division for finalization.

[Next Page](#)

BORROW SITE INVESTIGATIONS:

- The **Martin County** borrow area investigation is complete. The Corps is beginning to evaluate borrow area alternatives offshore of Martin and St. Lucie Counties. Hard bottom mapping for **Martin County** is completed and no impacts are anticipated.

Bathymetric surveys for **Sarasota County** are complete. Further borrow area delineation is expected to resume at the plans and specs level by mid March.

- The **Pinellas County, Sand Key** borrow area investigation is underway. Geotechnical work and surveys are complete. The sponsor will be applying to the FDEP for permits to use the borrow area.

In **Flagler County** a sand search project is currently underway. Bathymetric and seismic surveys of sand sources within state waters have been completed by Halcrow in support of the current Feasibility Study. Pending the permit from MMS, offshore sand source surveys will be initiated.

Plans & Specs are being prepared to utilize all remaining domestic sand sources offshore of **Dade County** as directed by the Assistant Secretary of the Army (Civil Works) in his 10 December 2007 memo to the Director of Civil Works recommending a three tiered approach to meet Dade County's beach renourishment needs. The Corps is currently preparing the Biological Assessment which is anticipated to be completed in early March and submitted to NMFS.

REGIONAL SEDIMENT MANAGEMENT:

Three complete regional sediment budgets for the sandy coast of Florida are available. A large push is being made to participate in the Gulf of Mexico RSM initiative, utilizing existing stakeholders to assist in a regionalization of information and technology. The Corps was recently awarded funding from the national RSM program to initiate an RSM study for the St. Augustine inlet vicinity.

The Southeast Atlantic Regional Sediment Source Study for Florida has been completed by GEC and Halcrow for SAJ. The report is currently available on: <http://planning.saj.usace.army.mil/rsm>. This Regional Sediment Management report approximates the volume of sand that remains offshore of Palm Beach, Broward and Miami-Dade Counties and compares that volume with the amount required by Federal and non-Federal nourishment projects over the next 50 years.

The Southeast Atlantic Regional Sediment Management Plan for Florida is currently being prepared by Taylor Engineering. The notice to proceed was issued on 28 January 2009. A final report is expected by mid June 2009. The Plan will be an **Addendum to the Dade County Letter Report**. The Regional Management Plan will expand on the previously completed Southeast Atlantic Regional Sediment Source Study (Halcrow, 2008) to evaluate sand sources currently available to St. Lucie, Martin, Palm Beach, Broward, and Miami-Dade Counties in order to address long term needs along Florida's Atlantic coast. Additionally, this document will examine the feasibility of including non-domestic sediment as an alternative source to Southeastern Florida's sediment needs.

CONSTRUCTION:

A Corps emergency construction project is soon to be underway at Manatee Harbor, in **Manatee County**. The project work consists of removing shoals from the Manatee Harbor Entrance Channel by means of dredging and bed leveling. The contractor performing the dredging will be Subaqueous Services, LLC. Work is expected to begin in early March. Maintaining the channel to the authorized depth is essential for to the safety and operational efficiency of the port.

Mobile District Project Updates:

Bay County – Internal comments on the Limited Reevaluation Report for the Carillon Beach and Pinnacle Port segment of the Panama City Beaches federal project area have been addressed and the report will hopefully be approved within 30 days. This one-mile project, which is adjacent to the existing 16.5 mile federal project area, could be constructed if economic stimulus dollars were provided. Additional funding for Hurricanes Ivan and Katrina have been set aside pending approval of the Project Information Report (PIR), which is near completion. With PIR approval, the repair project for the west and east ends of the 16.5 mile federal project area should be awarded this summer. In order to build both Panama City Beach projects, the local sponsor will need to expedite the completion of a portion of their ongoing large scale sand search.

Walton County – The Alternative Formulation Briefing (AFB) for the Walton County Beach Nourishment Project should take place within the next few months. Hopefully the Feasibility Study and Chief's Report will be completed prior to the next Water Resources and Development Act (WRDA) being passed by Congress. Without a completed Feasibility Report and project authorization, economic stimulus dollars cannot be allocated for this project.

Pensacola Navy Channel – Funding to construct the channel to 500 feet of its authorized 800 foot width may come as early as FY 10. Should these funds become available, approximately 3.5 million cubic yards of sand would be placed on the U.S. Park Service beach to the west of the channel over a 2-yr period.
